## PETROSLEEVE® Epoxy Material Safety Data Sheet updates

**[Nisku, Alberta, June 2013]:** PETROSLEEVE® Inc. has now received the updated epoxy MSDS sheets for 2013. This year, the product manufacturer did a complete MSDS analysis of the epoxy which has resulted in some significantly positive changes to the product MSDS information. Particularly, the epoxy is no longer considered dangerous goods for shipping. This is particularly significant for air transportation; however, does have savings when shipping by ground or sea as well. The epoxy specifications and technical data remain unchanged. The new MSDS sheets will be shipped with all new shipments and are also available at request by emailing [info@petrosleeve.com](mailto:info@petrosleeve.com).

### EPOXY PACKAGING & MIXING RATIO

The packaging will still consist of two parts, Part A and Part B. The Part A is shipped in a container that has the capacity to hold the entire contents of both Parts A & B. You only are required to transfer all of Part B into the Part A container and commence mixing. Neither Part A nor B is considered Dangerous Goods for transportation purposes.

Although the epoxy is no longer considered dangerous goods for Transportation, please remember to read, understand and follow all information provided on PETROSLEEVE® epoxy MSDS sheets.

The patented PETROSLEEVE® is the only permanent, non-intrusive pipe repair system that can be installed in 1 hour without interrupting operations. PETROSLEEVE® provides validated training information to assist our clients with their internal Contractor HSE Management Programs. For more information, visit <http://www.petrosleeve.com>.
